[Portfolio](#)

- 2 years of experience as a web developer as a full stack developer
- Experience working with task management tools
- Experience working on tight schedules
- Experience contributing to open-source, specifically in the game development area

Work Experience

INNOEM Sustainability and Innovation Consultancy Network

10 / 2023 - Present

Full Stack Developer

- Back End Development on Sustainfinity App
 - Utilizing **Node.js** and **PostgreSQL** to write **API** requests that help fulfill the business needs of the application.
 - Making sure the server is secure with **JWT** techniques and internal authorization tools.
 - Providing live updates on the server side using the command line interface.
- Front End Development on Sustainfinity App
 - Creating fast and user-friendly interfaces with **Vue.js**.
 - Writing reusable **internal solutions** for everyday problems like pop-ups, tooltips and other components.
 - Handling the client side authorization for better user experience.
 - Deploying the updates using **FileZilla**.

Ulak Haberlesme A.S.

07 / 2023 - 10 / 2023

Software Intern

- Creating an internal tool to view and update complex datasheets on the web browser using **Node.js**, **React.js** and **Python (pandas)**.
- Utilizing the **Pandas** library to parse data into meaningful **JSON** files for the interface.
- Creating a datasheet syntax that helps the data to be parsed.

Skills

Node.js, Vue.js, React.js, PostgreSQL, Postman, C#, Unity, Git

Education

Marmara University

09 / 2019 - 01 / 2024

Bachelor's Degree, Mechatronics Engineering

Personal Projects

AI Powered Image Sorting App

University Graduation Project

- Utilizing **Vue.js** and **Node.js**, created a web app that lets users upload images that they can manually manage such as deleting, setting as private, favoriting or sorting into albums they've created.
- With the help of **YOLOv5**, giving the app the power of automatically creating albums and sorting the uploaded images based on the context of the image.

AoTTG2:EE

Mod for an Open-Source Game Project

- Developing new features for the game as a mod including their multiplayer integration using **Photon**, **UI** integration and **optimization** utilizing **Unity** and **C#**.

For my other projects and more details about the list above, you can check my [portfolio](#).
